SUMMARY

Full-Stack Developer with hands-on experience building web applications, mobile applications, and standalone software projects using JavaScript, TypeScript, PHP, Python, React.js, Next.js, Laravel, and Flutter. Experienced in handling freelance and collaborative projects for academic, business, and government-related clients, from planning and development to deployment. Skilled in both technical and administrative tasks, including system troubleshooting, documentation, content management, and digital media tools. Passionate about continuous learning, eager to explore new technologies and tech stacks, and highly adaptable to different work environments and project requirements.

WORK EXPERIENCE

Freelance Full-Stack Web Developer (Project-Based)

Self-Employed | 2024 – 2026

- Developed custom web applications, business websites, and management systems for academic and business clients using React.js, Laravel, PHP, and MySQL.
- Built a restaurant website and POS system for Caffe Lilio Ristorante in Liliw, Laguna.
- Developed a business website for Mecha Tech, a repair service company.
- Created a landing page for Burgt Media, a Netherlands-based media brand.
- Helped develop a website for a music teacher project under Provide Impact, a US-based company.
- Designed secure authentication systems, admin dashboards, and structured database architectures.
- Managed the full development lifecycle, including planning, UI/UX structuring, development, testing, and deployment.
- Collaborated directly with clients to gather requirements and deliver user-focused, production-ready solutions.

Junior Full-Stack Developer (Contract-Based)

YUKTA App | January 2026 – April 2026

- Worked as part of a collaborative development team to help accelerate project completion before deadline delivery.
- Assisted in improving UI responsiveness, fixing frontend issues, and refining existing application functions based on urgent project requirements.
- Supported ongoing feature adjustments and general application improvements across different parts of the system.
- Collaborated with other developers in a fast-paced environment, gaining experience working within a team-based development workflow.
- Focused mainly on frontend and functional improvements, while backend database architecture and security implementations were handled by senior developers.
- Quickly adapted to unfamiliar tools, workflows, and development practices while working alongside experienced programmers.

OTHER WORK EXPERIENCE

Content Manager & Video Editor

Burgt Media | 2024 – 2026

- Managed and organized digital content across multiple online platforms.
- Planned and executed content strategies to improve engagement and visibility.
- Edited video content and designed thumbnails aligned with brand identity.
- Ensured consistent and high-quality content delivery in collaboration with team members.

Video Editor (Project-Based)

Noire Media | 2025

- Edited video content based on client requirements and creative direction.
- Delivered high-quality outputs optimized for social media platforms.
- Maintained consistency in branding and visual presentation.

Content Manager (Freelance / Personal Client)

2025

- Managed and scheduled content for a personal brand.
- Optimized posts using targeted hashtags and platform-specific strategies.
- Improved content organization and audience engagement.

Content & Web Strategy Contributor

Provide Impact | 2025

- Contributed strategic ideas for website development focused on the music teacher niche.
- Collaborated with developers on website structure, features, and user experience.
- Published and optimized content to increase reach and engagement.
- Supported digital marketing efforts aligned with client objectives.

EDUCATION

Bachelor of Science in Information Technology

- Graduated: June, 2026

PROJECTS

Government Housing Management System | Full-Stack Web Application

Developed a full-stack web application for the Provincial Urban Development and Housing Office during internship, using Laravel (Blade) and MySQL. Led the project in a team environment, primarily focusing on backend development and system architecture. Managed the admin-side functionality and user management system, where housing members' records are stored, organized, and accessed by department staff. Built features such as a custom internal messaging system, document storage module, and other administrative tools to support daily government operations and improve workflow efficiency.

Anti-Squatting Monitoring Android Application | Mobile Application

Developed a cross-platform mobile application as part of an internship project, using Flutter, React, and MySQL. Contributed as one of the developers handling both mobile and web components of the system alongside a companion government housing management platform. The application allows housing members to report illegal squatting or syndicate activities by capturing real-time photos, location, time, and coordinates. Reports are displayed on a map interface for Housing Office staff, enabling them to assess incidents, generate routes, and coordinate with authorities for response. Implemented controlled capture functionality where users can only take live photos (no uploads) to ensure report authenticity and prevent misuse of AI-generated or external images.

Caffe Lilio Ristorante Management System | Full-Stack Web Application

Developed a full-stack restaurant management system for Caffelilio Ristorante using vanilla PHP, MySQL, JavaScript, and Tailwind CSS. The system includes a Point-of-Sale (POS), online ordering, and table reservation features for customers. Integrated Semaphore API for phone number verification and real-time SMS updates for order and reservation status. Built an admin management system for handling sales tracking, table reservations, inventory monitoring, and dynamic menu updates. The POS system also manages ingredient costs and automatically deducts inventory per order, ensuring accurate stock and sales computation.

MechaTech Business Website | Full-Stack Web Development

Developed a business website for Mecha Tech using vanilla PHP, MySQL, and JavaScript, deployed on Hostinger. The website features a contact form integrated with the client's business email for handling inquiries and service requests. It also includes an admin management system for managing service requests and dynamically updating content displayed on the landing page. Handled the full development process from planning, database design, implementation, to deployment.

SKILLS

- **Programming Languages:** JavaScript, TypeScript, PHP, Python.
- **Frontend Development:** React.js, Next.js, HTML5, CSS3, Responsive Web Design, Component-Based Architecture, Framer Motion (Basic Knowledge)
- **Backend Development:** Laravel, RESTful API Development, Server-Side Scripting, Authentication & Authorization, MVC Architecture
- **Database Management:** MySQL, Database Design, Relational Database Structuring.
- **Mobile Development:** Flutter.
- **UI/UX & Design Tools:** Figma, WordPress, Adobe Illustrator, Photo Editing
- **Tools & Technologies:** Git, GitHub, Postman, XAMPP, VS Code, Android Studio, Microsoft Word, Microsoft Excel, Microsoft PowerPoint.
- **Software Development Practices:** Object-Oriented Programming (Basic Knowledge), Debugging, System Planning, Requirement Analysis, Agile Collaboration, Software & Hardware Troubleshooting.
- **Creative & Media Skills:** Adobe Premiere Pro, CapCut, Video Editing, Content Creation, Digital Media Management
